UNHIDDEN

Keep It Flat.

Look after it right and it holds you just as well on day three hundred as it does on day one. Here's the whole routine. It takes no extra effort once you know it.

YOUR CARE CARD · PART OF THE FINISH-LINE KIT

WHY THIS MATTERS

Two minutes now saves your tank for years

The thing that makes this tank work is the stretch built into the fabric. That same stretch is the thing that bad washing quietly kills.

Hot water, harsh drying and fabric softener all break down the fibres that do the holding. Treat it right and it keeps its grip for a long, long time. Treat it like an old gym sock and it will go slack in a month.

Good news. The routine is simple, and once you know it you'll do it without thinking. Here it is, start to finish.

STEP ONE

Washing

- **Turn it inside out first.** This protects the outside of the fabric and the knit pattern while it's in the machine.
- **Cold water, always.** Heat is the enemy of stretch. Cold cleans your tank perfectly well and keeps the fibres alive.
- **Gentle cycle.** Or hand wash if you want it to last even longer. Both are easy.
- **A small amount of mild detergent.** More soap does not mean cleaner. It just leaves residue that stiffens the fabric.
- **Wash it with soft, similar items.** Keep it away from anything with zips or Velcro that could snag the knit.

INSIDE OUT

COLD WASH

GENTLE CYCLE

THE ONE MOST PEOPLE GET WRONG

Skip the fabric softener

If you only remember one thing from this card, remember this one.

Fabric softener leaves a coating on the fibres that stops them springing back. It feels nice for a single wear, and then the compression is gone for good. It is the fastest way to ruin a tank like this, and most people have no idea they're doing it.

NEVER USE SOFTENER ON THIS TANK

Want it to feel softer anyway? Add a small splash of plain white vinegar to the rinse instead. It softens the fabric and cuts any detergent residue, and it does zero damage to the stretch. The smell washes out completely.

STEP TWO

Drying

This is where most compression gear dies young. The hot dryer warps and loosens the fabric faster than anything else you can do to it.

- **Air dry.** Hang it up or lay it flat and let it dry on its own. That's the whole secret to a tank that lasts.
- **Never a hot dryer.** If you take one thing from this page, that's it.
- **If you absolutely must use a machine,** lowest heat or an air only setting, and pull it out while it's still slightly damp.
- **Reshape it while damp.** A quick smooth back into shape with your hands and it dries exactly the way it should sit.

THE SHORT LIST

Four things to never do

- **No bleach.** It eats the fibres that hold you flat.
- **No ironing,** especially over the panels. Heat again, same problem.
- **No dry cleaning.** The chemicals are far too harsh for this fabric.
- **No hard wringing.** Press the water out gently with your hands instead of twisting it.

That's the full list of don'ts. Avoid those four and you've avoided every way people wreck a tank like this.

PRO MOVES

Make it last even longer

- **Rotate a few.** If you wear yours most days, having two or three means each one gets a rest in between, and the fabric fully recovers its stretch before you wear it again. This is exactly why the three pack and five pack exist.
- **Store it folded flat** in a drawer, not stretched over a hanger. Hangers slowly pull it out of shape under its own weight.
- **Wash it when it needs it,** not after every single wear unless it's had a hot day. Less washing means a longer life, and airing it out overnight is often all it needs.

KEEP THIS HANDY

The one glance version

Screenshot this page or stick it on the laundry shelf. It's the whole routine in one look.

WASH	Inside out, cold water, gentle cycle, a little mild detergent.
NEVER	No fabric softener, no bleach, no hot dryer, no ironing, no dry cleaning.
DRY	Air dry, hung or laid flat. Reshape while damp.
LAST LONGER	Rotate two or three, store folded flat, wash only when it needs it.

UNHIDDEN

Five minutes of knowing. Years of flat.

That's the trade. Learn the routine once and your tank holds its shape wash after wash, year after year.

Welcome to the club.
